

Workout Tracker

What is it?

A native mobile workout logger that runs workouts and stores each session with full details.

Create

Build custom workouts.

Run

Start the workout and complete sets.

Store

Each finished workout is saved as a detailed session in history.

Why?

Most workout apps charge for features I do not need.

Overbuilt

Many apps focus on analytics, coaching, and subscriptions instead of simple workout logging.

Overpriced

Basic functionality is locked behind monthly payments.

Personal solution

Build a minimal native app that does exactly what I need: create workouts, run them, and store sessions.

Dataset

Dataset with 800+ exercises under a free license.

Original dataset

github.com/wrkout/exercises.json

Edited dataset

github.com/yuhonas/free-exercise-db

Time frame

7 weeks

Week 1 - Researched frameworks and their fit.

Week 2 - Started learning one framework, realized the rest was out of scope.

Week 3 - Focused only on main framework.

Weeks 4-7 - Actual development.

The APP

**Install the APK file.
(only on Android)**
